

Chrome NewTel Plugin instructions.

1. Go to the chrome web store at <https://chrome.google.com/webstore/category/apps?hl=en> and search for "Newtel"
2. Add the extension to chrome.
3. Now you should see a NewTel logo in your apps bar on the top right of the browser. Click the icon to configure settings as follows.

Username: (your login to mypbxmanager.net or newtelsystems.com)*

Password: (your password to mypbxmanager.net or newtelsystems.com)*

Extension: Your SIP ID. You can find this number on mypbxmanager.net under Features->Telephone Lines. The 8 digit code used to describe your phone is your Extension.*

CallerID: This is the number that will show up on your phone after you initiate a click2call.

Plus + convert into: Often times + symbols are used to denote an international destination. This will automatically replace it with 011.

Blacklist/Whitelist: Choose where this app will work. If you want it to work on all websites select "Blacklist" and leave the Domains list blank. If you only want it to work on certain sites use the "Whitelist" Feature and include the domains you wish to be able to use the app on.

That's it! Just click on a phone number in chrome and your phone will automatically ring and be connected with the number.

* If you do not know your login information please send an email to support@newtelsystems.com with your information and we will send you out the information.
